GYM LOCATIONS

INR 60K

ANNUAL COST AVOIDED

Sagar Paperwala | Product Manager - Fitness 7

11 August 2026

Remove uncertainty from the gym floor

The app succeeds when a member can start the right workout without opening YouTube, asking ChatGPT, or waiting for a trainer.

01

No dependable routine

Members improvise when the original app is unavailable.

02

Exercise names are not enough

Text-only lists still require external demonstrations.

03

Equipment varies

A missing machine can stop the session without an alternative.

04

Repeated questions

Trainers spend time re-explaining basic setup and form.

PRODUCT PROMISE

Open. Understand. Train.

Fewer than two taps from the weekly home to the first exercise.

Start with proven cost avoidance

Keep confirmed savings separate from future retention or revenue hypotheses.

INR 30K

maintenance per gym

Confirmed annual baseline

2

Fitness 7 locations

Current business case

INR 60K

combined annual saving

Gross cost avoidance

50

pilot members

Committed first cohort

NET OPERATING VALUE

Gross maintenance avoided

minus

hosting + support + content + engineering

The PRD should not claim net savings until these operating costs are measured during the pilot.

Four releases turned a list into a companion

Visual routine MVP

Daily split, alternatives, illustrations, local checks

Guided workout

Two-screen mobile flow, warm-up, recovery, history

Account foundation

Member and coach apps, roles, plans, Supabase

Rich visual experience

Ten slots, three-phase guidance, extras, rings

V1

V2

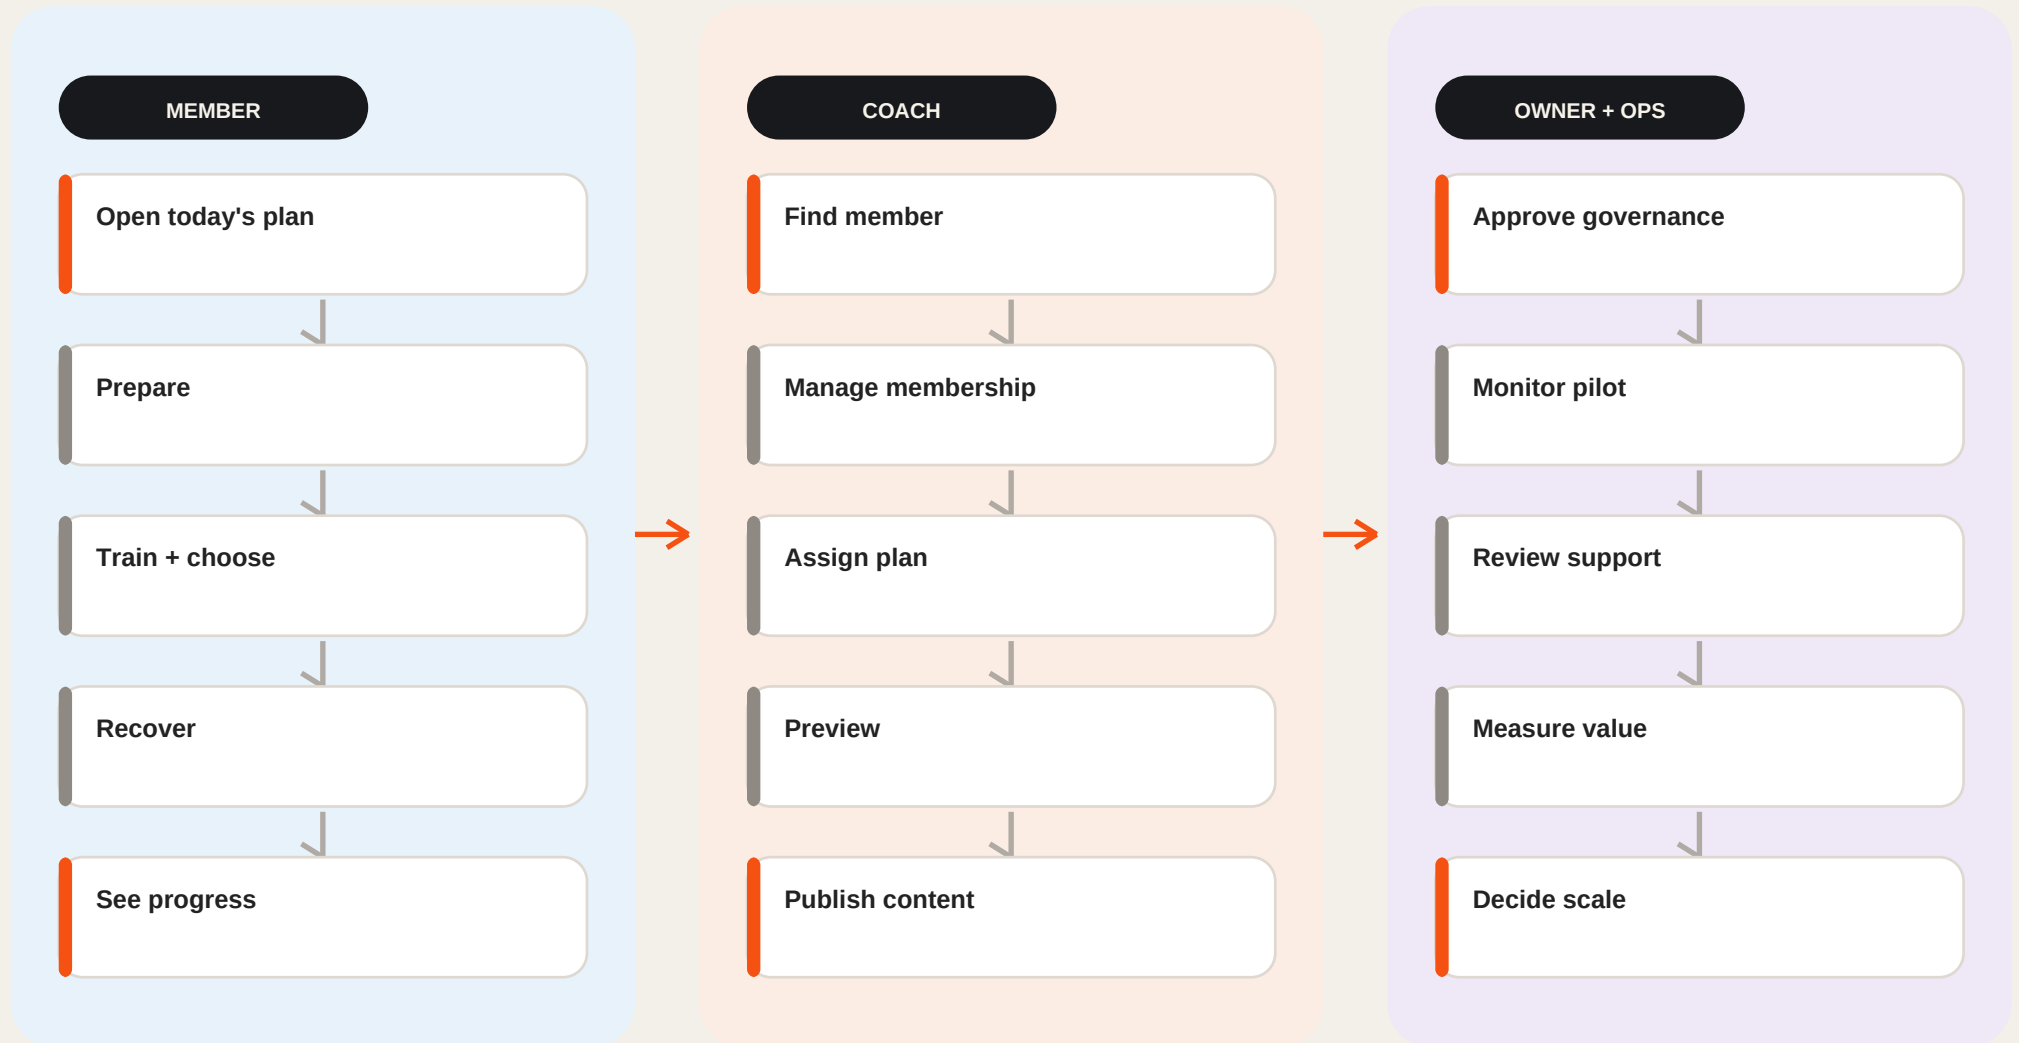

V3

V4

MANAGEMENT INTERPRETATION

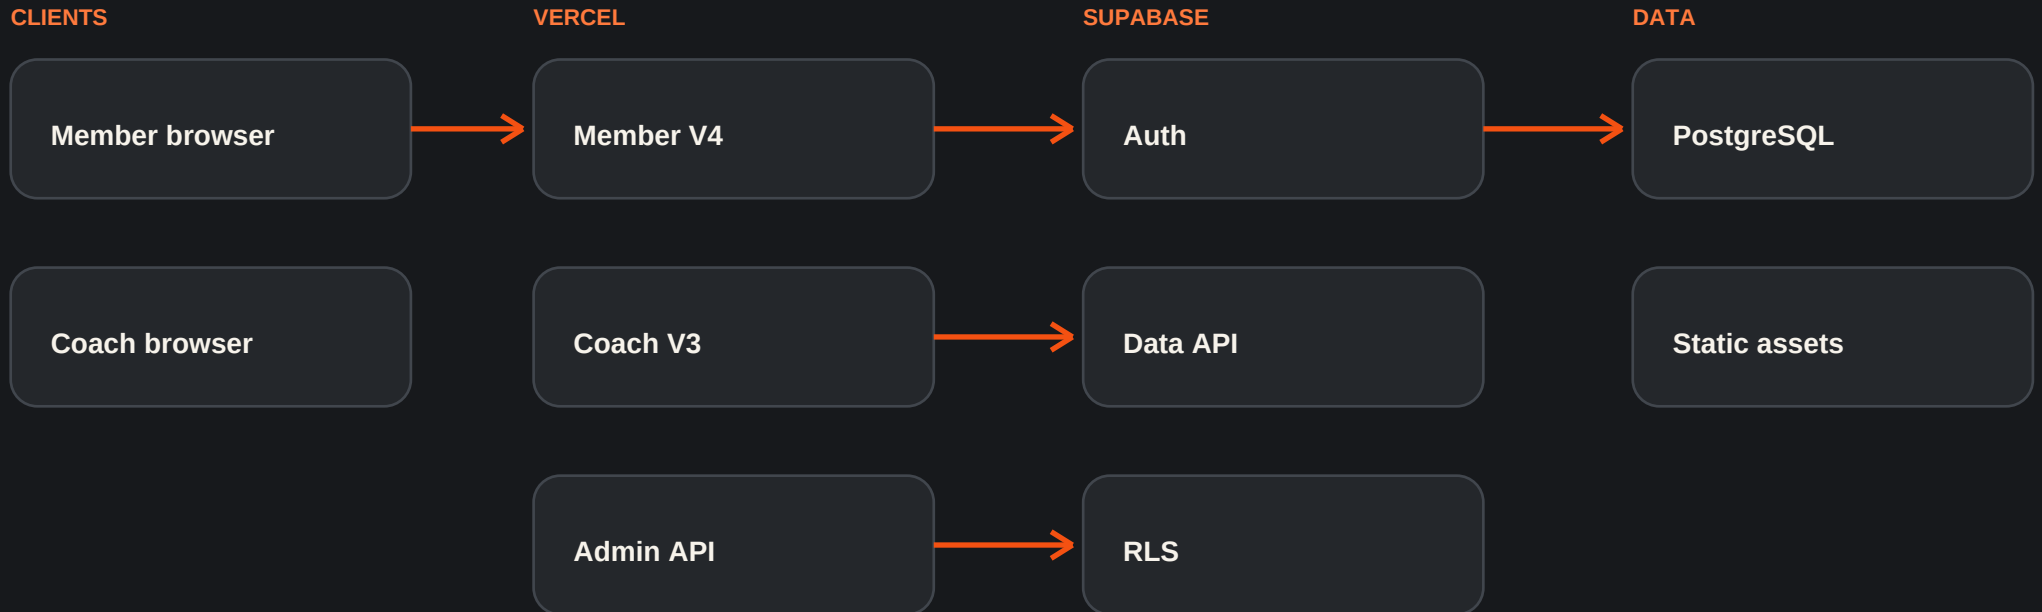

V4 is the showcase. V3 is the technical foundation. V5 must prove pilot readiness before production scale.

Three experiences, one operating loop

Separate apps, shared secure backend

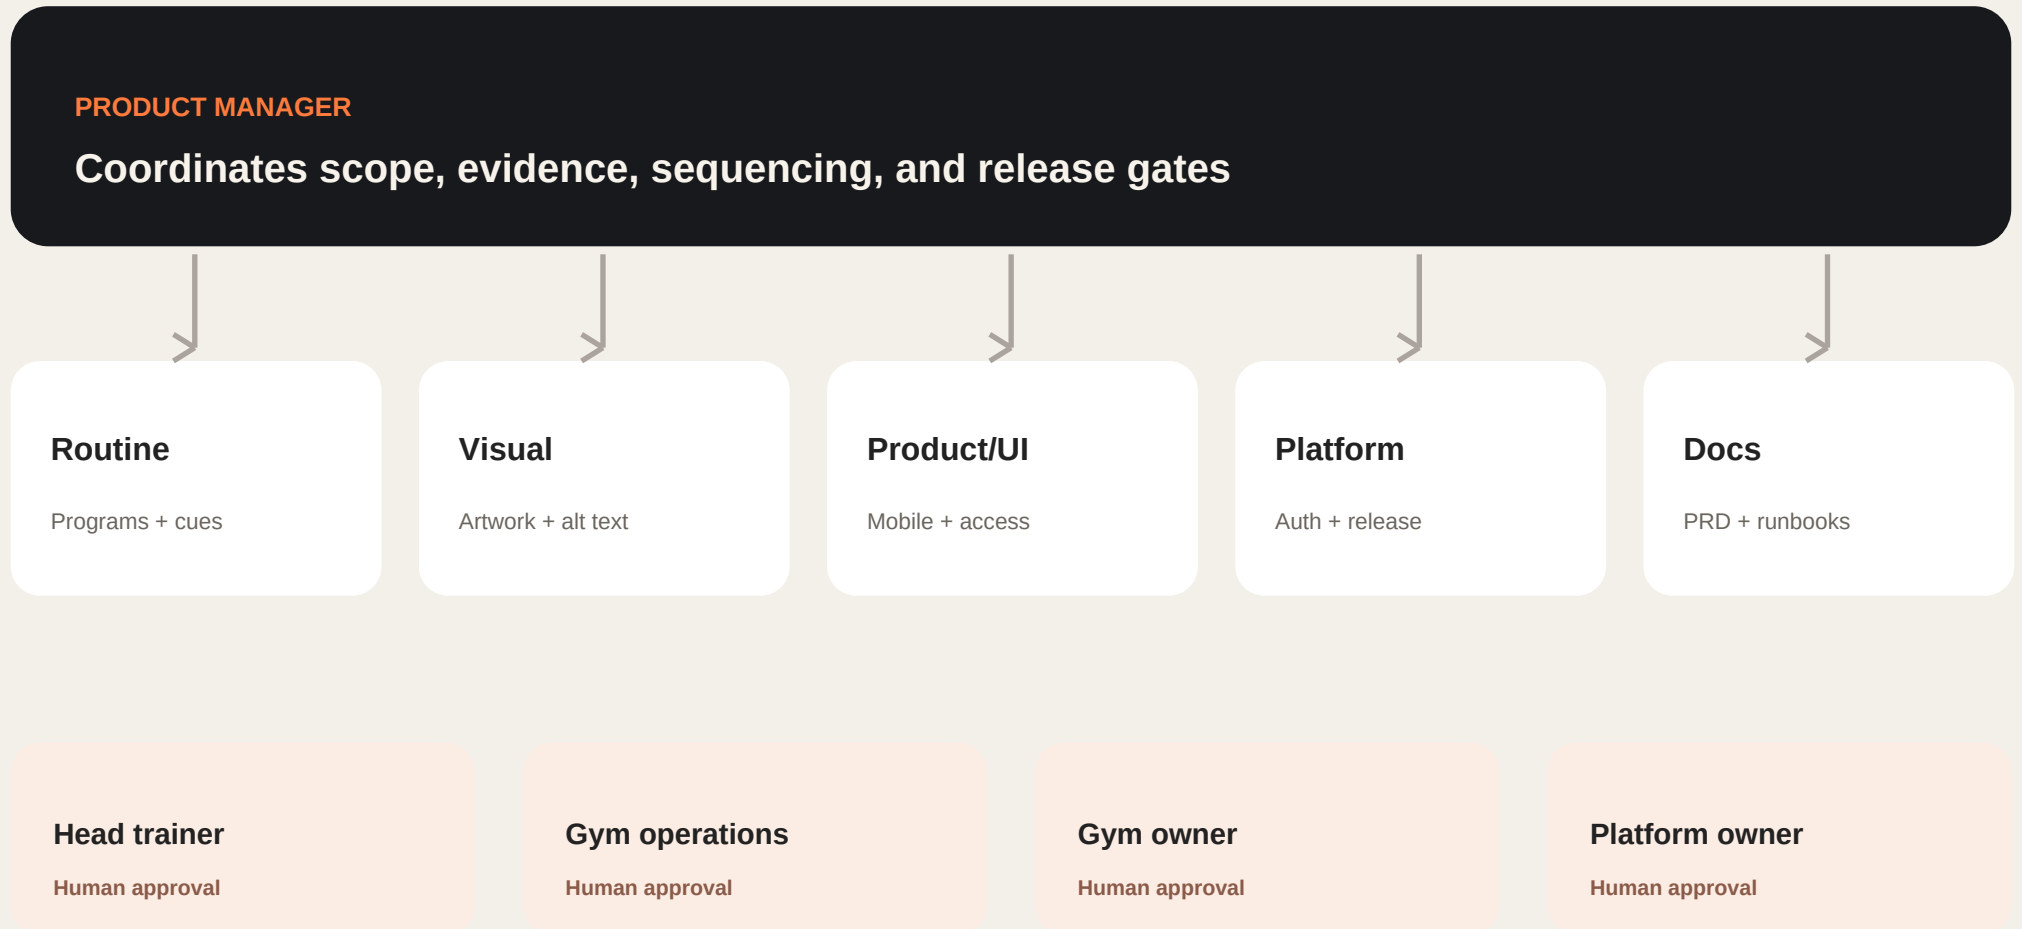

Member and coach interfaces remain isolated while Supabase enforces account and row-level access.

PRODUCTION ADDITIONS REQUIRED

Monitoring | analytics | RLS tests | content approvals | backup and restore | offline cache | rate limits

Agents accelerate delivery; humans own decisions

Approve the pilot, not full production

Close trust and operational gaps first; scale only when the evidence supports it.

0-14 DAYS

Trust + readiness

- Content and brand approval
- Privacy and security evidence
- Instrumentation + baselines

15-45 DAYS

50-member pilot

- Two-location cohort
- Weekly safety and support review
- Observe first-workout friction

46-90 DAYS

Evidence + scale

- Fix critical findings
- Calculate net operating value
- Approve, revise, or stop

RECOMMENDATION

Proceed with a controlled pilot. Do not position V4 as a production replacement yet.
